

Febex.
N°1 in the world for top quality
Sodium Hypophosphite.

New Febex brochure now out !

05/9/2007 - Bex - Switzerland.

The world's n° 1 for top quality Sodium Hypophosphite, FEBEX has for many years been the partner to the leading names in chemical nickel-plating for the electronics industry and for hard disks.

FEBEX invites you to discover its products and their applications in a new brochure specially prepared for formulators around the world. The brochure features the production of sodium hypophosphite at FEBEX's two global facilities (Switzerland and China), its product range, and its expertise in the field.

Sodium hypophosphite is used primarily as a reducing agent in many applications. For chemical (i.e. electroless) nickel-plating applications, SOFIBEX™'s outstanding quality marks it out from traditional competitive products. SOFIBEX™ is known around the world, and demanded for cutting-edge applications in which product quality is paramount for the reliability and profitability of the process.

In chemical and pharmaceutical manufacture, the SOFIBEX™ grades fulfil these sectors' most stringent requirements with their specifications and stable formulations.
